

Easys: electromechanical opening system for handleless furniture fronts

Handleless design throughout: handleless design fascinates with clean looking lines and generously proportioned surfaces.

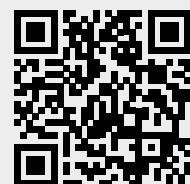

Elegantly integrated with a slimline look: at a mere 22 mm, Easys provides the lowest overall height on the market.

Luxurious opening

Easys opens the door to handleless fronts. Easys opens the door electromechanically in response to a light press on the front. And closes it automatically after 4 to 8 seconds. Without getting fingers trapped because they are safely out of the way. A particular advantage: the fitting is 22 mm thick – the lowest installed height on the market. Use Easys for handleless furniture design throughout.

Reliable opening and closing: the perfected control system prevents unintentional opening. This makes power assisted closing unnecessary.
